

# Staying Informed about Malaria

# Where to Research

- Annual Reports for basic facts and statistics
- Relief Efforts
- Relevant Legislation in Congress
- Research conducted by professors at your college of attendance or in your area
- Students who have worked with Malaria

# Online Research Resources

- The World Health Organization ([WHO](#)) is an excellent resource to research statistics, publications, general and technical information, prevention programs, and region specific information
- The 2008 [World Malaria Report](#)
- The Center for Disease Control and Prevention ([CDC](#)) is a good resource for researching the presence of malaria from a national perspective

# Relief Efforts

- The UN Wire is a good resource for tracking the efforts of the international community to fighting malaria
- Once again the World Health Organization is a valuable tool for this research

# Relevant Legislation in Congress

- This is an important aspect of research in order to learn what is prospectively being done in the field of public health and finding windows of opportunity for your efforts.
- Research relevant legislation [here](#).
- Note: It will be difficult to find information specifically about Malaria. However, researching governmental efforts to combat other diseases provides information on what can be done and supply leverage when pressuring representatives to fight against malaria.

# Investigative Research

- Ask around and talk to people at your college or university to find out who has personal experience with malaria or public health at large.
- Find out if they have any information for you or can guide you towards helpful resources.
